

TwinBridge™ — Product Overview

twinbridge.xalinalabs.com

- Local, executable digital twins of third-party APIs learned from real traffic (dev/staging).
- Deterministic replay by default: identical requests yield identical responses.
- Eliminates dependency on vendor sandbox uptime, quotas, and latency.
- CI-native: reproducible pipelines without external flakiness.
- Governed artifacts: versioned, hashable, schema-validated; optional signing.
- Not a production interception proxy; not intended for production capture or relaying.
